Description

Galileo Flight booking cancellation issue

Case 1 : suppose we open two transactions in a browser

One having 2 segments and second one having 4 segments.
Then I do cancel booking for first opened tab transaction, then in the cancellation request, the segment count send as 4.

Thus the api cancellation fails. But we update the status as cancelled successfully.

Case 2 : Suppose we get cancellation failed for any booking cancellation,. we are showing the message as cancellation success and the status is updated to cancelled booking. Please correct it.

Already fixed this issue in Otolat Project, please refer task id #83956
